EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert C. Faber on October 21, 2004.

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: the handwritten numbers, the voltage equations such as $(E - 0.7)$ and $(E - 0.2)$, and reference characters such as "Path A" in Figures 1-9 are not plain and legible, and will be corrected with clear and legible replacements. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the

drawing figures. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Claims 1-14 are allowed over the prior art.

The following is an examiner's statement of reasons for allowance: the closest reference Pearson (US 4,344,194) discloses a switch circuit for controlling the power supply to a DC load. The switch circuit has a first transistor (figure 4 ref# Q) with its emitter coupled to the power supply and its collector coupled to the load, an SCR switch (figure 4 ref# SCR) with its output coupled to the other side of the load and the power source and an activating input, first resistor coupled between the base of the first transistor and the input to the SCR switch (figure 4), and a momentary switch with its first terminal coupled to the activating input of the SCR switch (figure 4 ref# S2).

Pearson does not disclose a pulse generator coupled between the collector of the first transistor and the second terminal of the momentary switch and a capacitor device coupled between the collector of the first transistor and the output of the SCR switch. The specific location of the pulse generation device in combination with the rest of the circuit elements is the novelty of this invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
